removing and moving nameplates

INSTRUCTIONS

CLEARTECH DISPLAYS

REMOVING OR MOVING CLEARTECH NAMEPLATES

ClearTech Systems have a printed background beneath your clear acrylic nameplates. This printing is cured before it is shipped but there is always a chance that it could get scratched if proper care is not taken in moving, removing and adding nameplates.

Your display will be shipped along with a suction cup that is used to remove existing nameplates. Please push the suction cup straight on the nameplate that you would like to remove and pull straight out. Do not slide or drag the nameplate across the printed surface. Place your new nameplate by putting the top of the plate directly under the nameplate above it and then let the rest of the nameplate snap into position.

If care is used in this process your display will look great for years to come!
